

Dhruva

Motivated MCA student with strong foundations in cybersecurity, networking, and vulnerability assessment. Hands-on experience in network scanning, security testing, log analysis, and secure coding practices using tools such as Nmap, Wireshark, Burp Suite, Splunk, and Kali Linux. Passionate about identifying vulnerabilities, analyzing security risks, and improving system security through proactive testing and defensive security practices.

Academic Details

- Masters of Computer Application**
NMAMIT Nitte 2024-Present
CGPA:8.57
- Bachelor of Computer Application**
NMAMIT Nitte 2021-24
CGPA:7.97

Technical Skills

- Tools:
Nmap, Wireshark, Burp Suite, Metasploit, Kali Linux, Splunk, OWASP TOP 10
- Web & Database Technologies:
React.js, Spring Boot, Node.js, MySQL, MongoDB
- Operating System:
Windows, Linux
- Security & Networking:
Vulnerability Assessment, Penetration Testing, Web Application Security, API Security, Network Scanning, Packet Analysis, Reconnaissance, Threat Analysis, TCP/IP, Cryptography
- Programming & Scripting:
Python, Bash, JavaScript, Java

Workshops & Certificates

- Flutter Workshop
- Cloud Computing by Wipfli
- VAPT Course By Sharyians School

Hobbies

- Solving security challenges on TryHackMe
- Playing PC Games
- Listening to Music
- Exploring Technologies and Tools

Personal Details

Date of Birth: 15th September
Languages Known: English, Hindi, Kannada and Japanese(Basics)
Address: Kundapura, Udupi Karnataka

Profile Summary

- MCA graduate (2026) with strong foundations in cybersecurity, networking, and system security.
- Hands-on experience with Nmap, Wireshark, Burp Suite, Kali Linux, Splunk, and security testing tools.
- Skilled in vulnerability assessment, penetration testing, network scanning, packet analysis, and secure coding practices.
- Developed security-focused projects involving web application security testing, network vulnerability analysis, and secure file handling.
- Passionate about VAPT, ethical hacking, and improving system security through proactive security testing.

Network Scanning & Threat Detection using Nmap and Splunk (May 2026)

Tech Stack: Nmap, Splunk, Python , Linux

- Performed TCP SYN, service/version, and OS detection scans to identify exposed ports and potential vulnerabilities.
- Analyzed network traffic and suspicious communication patterns using Wireshark.
- Automated scan result analysis and reporting using Python scripts for faster vulnerability identification.
- Documented identified risks and recommended mitigation measures to improve network security..

Secure File Upload & Public Download System (Dec 2025)

Tech Stack: React.js, Express js, MongoDB

- Developed a secure file-sharing platform with controlled public access, authentication, and authorization mechanisms.
- Performed security assessments on REST APIs to identify and mitigate risks related to unauthorized access, improper input validation, and insecure data handling.
- Implemented secure file upload validation, access-control checks, and backend security measures to reduce common web application vulnerabilities.
- Applied secure coding practices to strengthen application security and protect sensitive file metadata and user interactions.
- Enhanced data protection by enforcing server-side validation, secure request handling, and controlled file access workflows.

Web Application Security Assessment Lab (Jan 2026)

Tech Stack: Burp Suite, Kali Linux, Python

- Performed vulnerability assessment and basic penetration testing on web applications in a controlled lab environment.
- Identified common web vulnerabilities including insecure authentication, input validation flaws, and misconfigurations.
- Used Burp Suite for request interception, traffic analysis, and security testing of web APIs and applications.
- Documented findings with vulnerability descriptions, risk impact, and remediation recommendations.

VAPT Home Lab Setup & Security Testing (May 2025)

Tech Stack: Kali Linux, Python, Nmap, Wireshark, VirtualBox

- Built a virtual penetration testing lab environment to practice vulnerability assessment and network security testing.
- Conducted reconnaissance, port scanning, and traffic analysis using Nmap and Wireshark.
- Developed Python scripts for scan automation, log analysis, and basic security testing tasks.
